Sheet Wax RTM Squares

When sheet wax is used in very large applications, such as resin transfer molding (RTM) in the boat building industry, it is often advantageous to apply two layers of sheet wax to achieve the desired thickness. The first layer is composed of smaller 6"x6" sheets, applied leaving a thin gap (.015-.020") between the edges of each sheet. Then a second layer of our full size sheet wax is applied. It is now possible to pull a vacuum through the gaps of the first layer. This negative pressure firmly secures the second layer against the first and aids the adhesive in maintaining a uniform thickness throughout. This is especially important in dusty environments where the adhesive alone may not hold throughout the tooling process.
