EMLContact Cleaner Lubricant

EML is a solvent/lubricant blend designed to remove surface contamination and oxidation from all metallic contact surfaces. Use of the product reduces electrical resistance across the switch or connector by increasing the surface area of the contact. EML also ensures long term protection from corrosion and arcing by depositing a thin film of Electrolube (2X Oil) Contact Lubricant.

Excellent electrical properties; reduces contact resistance to a low stable level without altering frequency

Typical Product Applications

Primarily for slider / rotary tuners, potentiometers, for friction, ball or roller wiping contacts, slip rings and brushes. EML can also be used in rocker/push-pull switches, edge connectors, plugs and sockets, valve pins, bulb holders, switch gear, locks, hinges and general electro-mechanical uses.

EML200F and ELM400D contains flammable solvents in order to remove CFC content. It should not be sprayed onto live contacts or other sources of ignition.
