KIMYA ABS CARBON 3D FILAMENT

Low-cost reinforced filament for FFF 3D Printers

DESCRIPTION

Kimya ABS Carbon is a 3D printing filament made from a blend of ABS (Acrylonitrile-Butadiene-Styrene) and carbon fibers. As a member of the styrenic polymer family, this composite material benefits from the toughness of ABS while the added carbon fibers significantly improve its rigidity and dimensional stability. Kimya ABS Carbon is commonly used by drone manufacturers, modeling enthusiasts, and for producing tools and functional parts. It offers a strong balance of strength, durability, and precision for technical 3D printing projects.

BENEFITS

- Increased Rigidity.
- Lightweight and Strong.
- Enhanced Print Precision.
