Fiche Technique

KIMYA PEBA-S 3D FILAMENT

Test Methods

Flexible and high-elongation filament for FFF 3D printers

DESCRIPTION

Kimya PEBA-S is a 3D printing filament made from PEBA (Polyether Block Amide), a thermoplastic elastomer known for its exceptional flexibility and energy return. Produced through the polycondensation of a polyamide and a polyether, PEBA-S stands out with an elongation at break greater than 550%, making it the most flexible material in the Kimya range. Its elasticity and rebound properties make it ideal for sports equipment and impact-absorbing parts.

BENEFITS

- Flexible.
- Great Impact resistance.
- · Lightweight.
