KIMYA PETG CARBON 3D FILAMENT

PETG/Carbon Fibre additive manufacturing filament

DESCRIPTION

Kimya PETG Carbon is a 3D printing filament made from PETG reinforced with carbon fibres. This combination enhances the mechanical performance of standard PETG by significantly increasing its rigidity and strength. As a result, PETG Carbon is particularly well-suited for producing technical parts that require dimensional stability and durability. It is especially valued in the automotive sector for functional components where performance and precision are key.

BENEFITS

- High rigidity.
- Easy to print.
- Wide range of applications.
