

DGT Multi-Purpose Penetrating Fluid

DGT has a powerful double action; it penetrates and lubricates mechanical parts and then produces a highly water-resistant film, which excludes moisture, providing long-term corrosion protection. The grease also prevents squeaking in numerous mechanical assemblies including locks, hinges, bolts, piping, sliding surfaces etc.

- Specially designed to penetrate rapidly into assemblies blocked by metal corrosion
- Releases, cleans, lubricates, protects and eliminates moisture
- Leaves a highly water resistant film to protect from corrosion
- Ideal for breakdown and maintenance services, public works and industry (mechanical, agricultural etc)

<u>Description</u>	<u>Packaging</u>	<u>Order Code</u>	<u>Shelf Life</u>
Multi-Purpose Penetrating Fluid	400ml aerosol	DGT400	36 Months

Directions for Use

Shake the aerosol can before use. Spray onto the parts to be treated. Wait a few moments and repeat the process for highly corroded parts. Operate the part to be lubricated if necessary. Allow the solvent to evaporate completely before resuming use.

Typical Applications

Household uses include electrical and mechanical tools, sewing machines, hinge-pins, locks & hinges. Also used for hunting and fishing equipment, ski bindings, lawnmowers, motor saws, shears, bicycles etc. Automotive applications include car lighting circuits cables aerials, doors, windscreen wipers, coils etc.
